

# Acrylic Impregnated Protection

## 50% More Crush-Resistant

Commercial traffic can ruin the beauty of hardwood floors. Even the hardest wood species are susceptible to damage resulting from everyday wear and tear. Domestic oak established the industry benchmark for tough commercial performance. But today, your choice of domestic and exotic species is growing.

Armstrong's exclusive acrylic impregnation process produces boards that are **50% more crush-resistant** than unprotected wood of the same species, **protecting against dents, dings and damage to the floor.** They're the most durable floors in our portfolio.

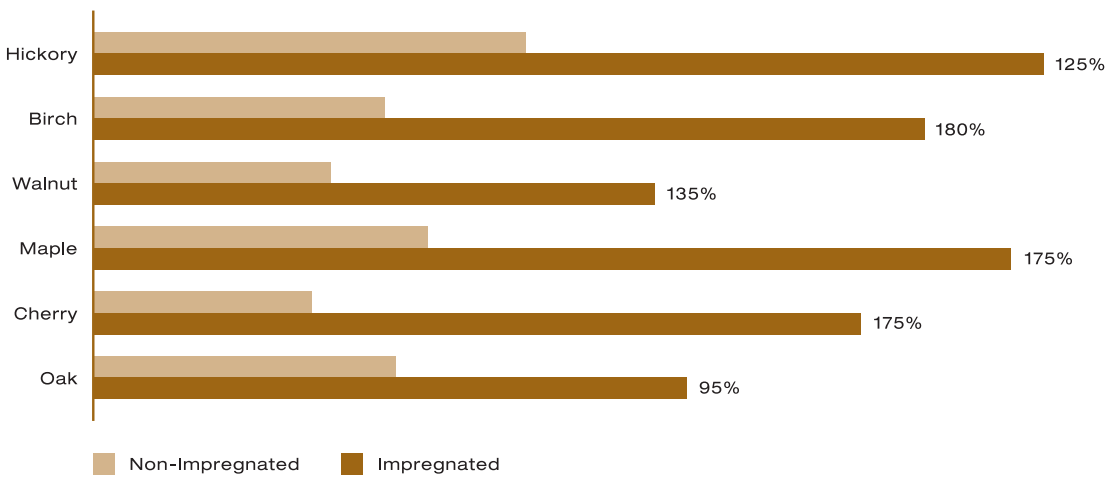

Non-Impregnated

Impregnated

*Acrylic impregnation fills and supports wood's open cells, creating unprecedented indentation and wear resistance.*

### Relative Hardness Approximations

## Through-Color That Lasts

Armstrong injects stain pigments completely through the wear surface of each acrylic impregnated hardwood board. The result is brilliant, consistent through-color that stays true over time. This is **color that won't wear down, walk out or wash off.** It's color you can count on for the life of the floor.
