## Look of Linear Wood Available Three Ways in Armstrong WoodWorks® Panels

*Fast, easy-to-install panels offered in veneered or solid wood, including industry's first tapered visual*

Architects, interior designers, building owners, and facility managers desiring the rich, natural look of linear wood now have three additional choices in the Armstrong line of WoodWorks® ceilings, including the industry's first tapered visual.

In addition to popular WoodWorks Linear Planks, new design options now include both WoodWorks Linear solid wood panels with a traditional plank visual and WoodWorks Linear wood veneer panels with either a traditional or unique, new tapered look. Armstrong is the first wood ceiling manufacturer to offer the tapered visual.

The fast, easy-to-install veneered wood panels measure 2'x 8' in size, and are available in nine veneer options. Traditional wood planks are offered in nominal 4" and 6" widths, while the width of the tapered planks narrows from nominal 8" to nominal 4". Hook-on panels for use with standard 15/16" suspension systems provide safe and secure downward accessibility and impart a clean, monolithic look.

The new 1'x 8' solid wood panels are offered in two plank widths – nominal 3" and nominal 5" – and four rich finishes. Installation of the panels is accomplished by either screwing them into a suspension system or installing them with backer clips.

### Panels Are FSC® Certified

WoodWorks Linear Veneered Panels and Solid Wood Panels are both FSC® Certified as products representing responsible production and consumption practices from the forest to the consumer. In addition, the veneered panels feature 100% Biobased content certified by the USDA BioPreferred® Product program.

Both panels are also offered with a BioAcoustic infill or acoustical fleece for increased acoustical performance.
